

Computer Forensics Provides Pivotal Evidence in Federal Judge's Opinion in Fraud Case

Spectrum Computer Forensics Offers Free Case Study on the Power of Digital Discovery

FRANKLIN, Mich. – January 25, 2007 – Spectrum Computer Forensics & Risk Management LLC, a leading provider in digital-discovery and computer-forensic services, was recently cited in an important Federal Court opinion. Spectrum's advanced computer forensics revealed clear and overwhelming evidence in this insurance fraud case. Moreover, convincing expert-witness services provided by Spectrum helped deliver the full impact of the findings to the court.

The opinion, OPINION AND ORDER GRANTING PLAINTIFF'S "MOTION FOR JUDGMENT BY DEFAULT AND PARTIAL SUMMARY JUDGMENT AGAINST DEFENDANT ACG ENTERPRISES OF NC, INC.", details the federal judge's serious consideration of the computer-based findings that provided indisputable evidence of fraud and tampering.

"More and more, the Federal Courts are setting e-discovery precedents and these are cascading into the State Courts as well. Add the revised Federal Rules of Civil Procedure and the complexities arising from regulatory requirements, and we find computer forensics increasingly indispensable to the courts and businesses alike. We are giving attorneys and their clients powerful tools for scrutinizing and preserving key electronic information." said Stott Matthews, Spectrum's founder.

"The explosion in digital storage is driving a shift in the paradigm of discovery and cutting across all facets of the law. Traditional e-discovery methodologies would not have provided the pivotal information critical to this case. By partnering with computer-forensic experts, litigators will turn these challenges into advantages and ensure the best outcome for their clients", added Matthews.

The attorneys of Detroit-based Butzel Long provided the powerful legal force that leveraged Spectrum's capabilities in this case.

Spectrum Computer Forensics & Risk Management is offering an executive summary of this Opinion and the critical use of computer forensics in the process of discovery. Both this summary and the entire opinion are available at www.spectrumforensics.com/pr.php

About Spectrum Computer Forensics & Risk Management

Spectrum is a leader in providing digital-discovery and computer-forensics services, and the risk-mitigation strategies that surround these practice areas. Law firms and corporations rely on Spectrum for the most challenging e-discovery work involving employment, trade secret, intellectual property, and other litigation-related matters. Founder and Principal, J. Stott Matthews, is certified in computer forensics. Together with his experience as a Fortune 10 executive, Matthews' expertise bridges the critical gap between technology, business, and the law. Spectrum has offices in Michigan and Philadelphia, Pennsylvania.
